NAME

rrdlast − Return the date of the last data sample in an RRD

SYNOPSIS

rrdtool last *filename* [**−−daemon|−d** *address*]

DESCRIPTION

The **last** function returns the UNIX timestamp of the most recent update of the RRD.

filename   The name of the **RRD** that contains the data.

−−daemon|−d *address*

Address of the rrdcached daemon. If specified, a `flush` command is sent to the server before reading the RRD files. This allows **rrdtool** to return fresh data even if the daemon is configured to cache values for a long time. For a list of accepted formats, see the **−l** option in the rrdcached manual.

```
rrdtool last --daemon unix:/var/run/rrdcached.sock /var/lib/rrd/foo.rrd
```

ENVIRONMENT VARIABLES

The following environment variables may be used to change the behavior of `rrdtool last`:

RRDCACHED_ADDRESS

If this environment variable is set it will have the same effect as specifying the `--daemon` option on the command line. If both are present, the command line argument takes precedence.
